

**Strategy Companion Analyzer 3.0.2361 Hot Fix 3 Release Note**
**Change History**

**IMPORTANT PLEASE READ: Starting from 3.0.2361 Hot Fix 1 Analyzer application pool should be set to use .NET 4.0 and Integrated Mode.**

Item	Description	Comments
1	FS#3792 Copy Sheet issue	Copy sheet issue - when a user copies a table and chart into another sheet of the same report the chart is still connected to the original table.
2	FS#3793 Image Management Issue (analytic board)	Image management—cannot name images that were previously loaded in 2360 (invisible to users) or the same as another user within another company.
3	FS#3818 IE issue. Closing a new report by using the “x” on the report tab hangs.	Save As using the “x” to close (Blue cross on the report tab) on a new report hangs meaning the user cannot save and loses all changes. IE issue.
4	FS#3814 Sheet name got changed after exported to Excel	Sheet name got changed to “Sheet1-1” after exported to Excel
5	FS#3440 Date-Month swap issue with some European date-time format causing AES not able to generate output.	Some language settings would cause the Date-Month to be swapped for example Jan 13 <sup>th</sup> becomes 13 month 1 <sup>st</sup> which does not exist thus causing MDX to fail (blank output).
6	FS#3866 QuickFilter selection list does not matches the language selected	After user switches report language from English to French for example the list still shows English item names.
